- The production of synthetic gasoline ceased at Leunawerk at the beginning of September, because of the lack of "Schwelteer" (carbonizing tar?). The hydrogenation of coal required too much hydrogen, which was needed in order to keep the other plants at the Leunawerk running.
- Production of other commodities amounts to the following:
 - Nitrogen - 300 tons per day
 - Methanol - 25,000 tons per year
 - High-grade alcohols - 20,000 tons per year
- However, eight ammonia ovens have just been dismantled. As each oven was capable of producing thirteen tons of nitrogen per day, this means a loss of approximately 37,500 tons of nitrogen per year, or about one third of the present production.
- The present managing director is a Russian called Makhanov.
